

Screws supplied x4

We do not recommend cross bracing units that are taller than 148cm and less than 30cm deep, instead use wall attachments or a combination of wall attachments and cross braces

Select the crossbrace size to match the shelf width

Shelf width	Crossbrace length	Product code
40cm	63cm	CB40
50cm	73cm	CB50
60cm	83cm	CB60
70cm	96cm	CB70
80cm	108cm	CB80
90cm	116cm	CB90
100cm	126cm	CB100
120cm	155cm	CB120

Cross braces are not suitable where the width is greater than the height

Note: When building multiple bays you only require a brace every other bay of shelving

For example for a 3 bay setup, build bay 1 and bay 3, fit the cross braces and then use shelves to join them

NB: Wall attachments are sufficient to secure your system, without the need of a cross brace
